

Construction Update for the Week of April 1

This week, the construction team will install vibration monitors at the bridge over Crystal Creek and inspect the foundations of structures closest to the work zone. This step is being taken to ensure safety, as the monitors will measure any movement of the roadway or buildings while the contractor installs the cofferdams. Cofferdams are temporary structures designed to allow the contractor to build the new bridge piers.

On the north section of Main Street, the new water main work will begin. Work will start at the intersection of Main and Front streets and proceed north.

Please share the detour map, which can be found on the [project website](#), with your customers, employees and delivery drivers. As a reminder, the village parking lot at Harrison and Washington streets is available for workers, businesses and visitors.

For more information and the latest detour map, visit the [Old Town project website](#).
