

Construction Update for the Week of June 17

Construction of concrete retaining walls and abutments for the bridge will continue this week. The abutments will connect the surface of the bridge to the ground and help support the weight of the roadway over the bridge.

As a reminder, crews hope to finish bridge construction this summer and will then begin installing the pedestrian covered walkways and new steel archway.

Construction of the new storm and sewer infrastructure on the north section of Main Street is complete! The roadway has been patched and lane markings striped allowing crews to reopen Main Street north of Algonquin Road to all traffic. We thank you for your patience during this stage of construction.

For more information and the latest detour map, visit the [Old Town project website](#).
