

## Construction Update for the Week of June 24

Construction of the bridge continues with progress being made on the supporting structures. Crews completed the north section bridge concrete retaining walls and abutments this past week. Focus will now shift to pouring the concrete for the southwest retaining walls. Once that work is completed the abutments for the south section of the bridge will be constructed.

As a reminder, crews hope to finish bridge construction this summer and will then begin installing the pedestrian covered walkways and new steel archway.
